Ideation Phase

Brainstorm & Idea Prioritization

Date	20 October 2026
Team ID	
Project Name	Global Olympic Sports Performance Analysis using Tableau
Maximum Marks	4 Marks

Step 1: Selected Problem Statement

How might we help Olympic committees, investors and sports journalists understand what drives Olympic medal success between 1992 and 2026, so they can make confident, data-driven decisions?

Step 2: Brainstorm, Idea Listing and Grouping

Medal Performance	Trends & Hosts	Regional & Investment	Usability & Web
Bar chart: total medals by country (Top 15)	Line chart: medals over the years by season	Pie: avg medal efficiency by region	Radial gauge: average efficiency
World map of medals by nation	Bar chart: host-nation medal totals	Bubbles: investment vs medals	Medal-type parameter (Total/Gold/Silver/Bronze)
KPI cards: medals, nations, athletes, Games	Dot plot: Summer vs Winter by country	Donut: medal share by region	Guided 8-scene story
		Treemap: region → country	Flask website embedding

Step 3: Idea Prioritization

Ideas were placed on an importance-vs-feasibility grid. All ideas rated high on feasibility were built into the two dashboards and the story; the predictive model was deferred to future scope due to time constraints.

Idea	Importance	Feasibility
Bar chart: Total Medals by Country	High	High — built (Dashboard 1)
Line chart: Trend of Medals Over the Years	High	High — built (Dashboard 1)
Map: Total Medal Achievements Across Nations	High	High — built (Dashboard 1)
Bar chart: Avg Medals per Athlete by Sport Category	High	High — built (Dashboard 1)
Pie: Avg Medal Efficiency by Region	High	High — built (Dashboard 2)
Packed bubbles: Sports Investment vs Medals	High	High — built (Dashboard 2)
Bar chart: Medal Totals Across Olympic Hosts	High	High — built (Dashboard 2)
Donut: Medal Share by Region / Radial gauge	Medium	High — built (Dashboard 2)
Treemap and connected dot plot	Medium	High — built (Story)
Predictive model for future medal counts	Medium	Low — deferred (future scope)
