Requirement Analysis Phase

Data Flow Diagram & User Stories

Date	20 October 2026
Team ID	
Project Name	Global Olympic Sports Performance Analysis using Tableau
Maximum Marks	4 Marks

Data Flow Diagram

The diagram below shows how data moves through the project: from the raw Kaggle CSV files, through relationships, preparation and visualization in Tableau, into the dashboards and story, out to Tableau Public and the Flask website, and finally to the end users.

User Stories

The table below lists the user stories for this project.

User Type	Functional Requirement (Epic)	User Story No.	User Story / Task	Acceptance Criteria	Priority	Release
Data Analyst	Data Collection & Extraction	USN-1	As a data analyst, I can connect the 4 Olympic CSV files to Tableau and relate them so that I can build visualizations.	All 4 tables load with correct row counts (8,000 / 910 / 18 / 60) and relationships work.	High	Sprint-1
	Data Preparation	USN-2	As a data analyst, I can verify data types, nulls and duplicates so that my charts are accurate.	No nulls in key fields; Year set as discrete dimension.	High	Sprint-1
	Data Preparation	USN-3	As a data analyst, I can create calculated fields and a parameter so that I can measure efficiency and switch medal types.	7 calculated fields + Select Medal parameter validated.	High	Sprint-1
	Data Visualization	USN-4	As a data analyst, I can create charts of medals, trends, hosts, regions and investment so that I can identify performance patterns.	12 unique charts + 4 KPI cards; values match source (e.g. USA 735, China 696).	High	Sprint-2
	Dashboard	USN-5	As a data analyst, I can combine charts into 2 dashboards with filters so that users can explore interactively.	Both dashboards render without overlap; filters update all charts.	High	Sprint-2
	Storyboard	USN-6	As a data analyst, I can create a guided story so that non-technical viewers follow key insights.	8 scenes, each with caption and description.	Medium	Sprint-2

	Performance Testing	USN-7	As a data analyst, I can document data volume, filters, calculated fields and chart count.	Written summary completed.	Medium	Sprint-2
	Web Integration	USN-8	As a data analyst, I can embed the dashboards and story in a Flask website so that users access them in one place.	All Flask pages return HTTP 200 and show the embedded views.	High	Sprint-2
	Documentation & Demo	USN-9	As a data analyst, I can record a demo video and write documentation so that the project can be reviewed end-to-end.	5–7 minute video and documentation uploaded with working links.	High	Sprint-2
Mentor / Reviewer	Project Review	USN-10	As a mentor, I can view the published dashboards, story, website code and demo video so that I can evaluate completeness.	Demo link and GitHub link are accessible.	High	Sprint-2
